DIGITAL 2100 SERVER CUSTOMER LETTER

EK-PBSUB-CL. A01

August 1994

Dear Customer,

Due to a materials shortage, Digital has substituted a PCI-based VGA controller for the EISA-based VGA controller (PB2GA-AA) that is normally embedded in the Digital 2100 Server system.

The PCI controller is a state-of-the-art controller that provides functionality equivalent to the PB2GA-AA. In some cases you may experience higher performance, since this is a PCI-based option. We are confident the PCI controller will fully satisfy your needs.

Sincerely,

Digital Equipment Corporation
