B2012 CPU Module

B2012 Overview

Description	The DEC 4000 AXP CPU is based on the DECchip 21064 microprocessor, a CMOS-4 superscalar, superpipelined implementation of the Alpha AXP architecture. DEC 4000 backup cache is a 4-MB direct-mapping physical write-back cache. The CPU supports the “snooping” protocol to allow for a dual-processor implementation.
Voltage	+5 V and +3.3 V
Current	+5 V: 13 A and +3.3 V: 14.5 A
Clock Speed	190 MHZ
Temperature	5°C (41°F)–35°C (98°F) (operational)
Relative humidity	10%–90%
Power	47.8 W (max)

Order number

B2012 CPU module	KN431-AA
------------------	----------

Documentation

<i>DEC 4000 AXP Technical Manual</i>	EK-KN430-TM
--------------------------------------	-------------

Note

If you upgrade to a dual-processor system, both CPUs must have an identical clock speed rating.

Figure 1 B2012 CPU Module

1 Insert first CPU into slot 0.

2 For SMP (symmetric multiprocessing) insert second CPU into slot 1.
