MEMORY CHANNEL™ Release Note
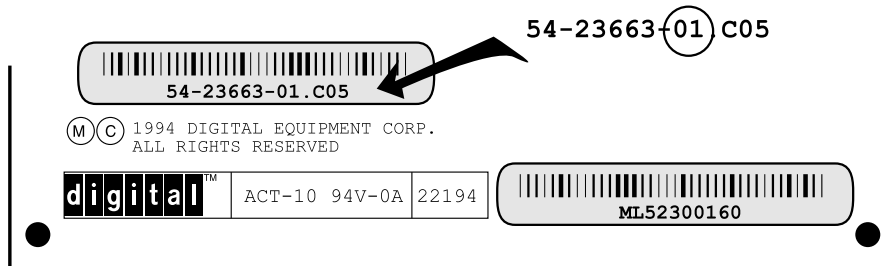

OpenVMS currently supports only the CCMAA–AA PCI adapter

If you are running OpenVMS on your MEMORY CHANNEL cluster, you must use only CCMAA–**A**A adapters in your systems' PCI slots. Support for CCMAA–**B**A is expected soon, but is not yet available.

To verify the CCMAA adapter variant, check the 54-part barcode label on the end of the board. The CCMAA–AA adapters have an –01 extension as shown in Figure 1-1. The CCMAA–BA adapters have an
–02 extension.

Figure 1-1: Identifying the CCMAA–AA Adapter Variant
