

PowerStorm 300 Graphics Controller Option

Important: Read This First

EK-PS3GO-IG. A01

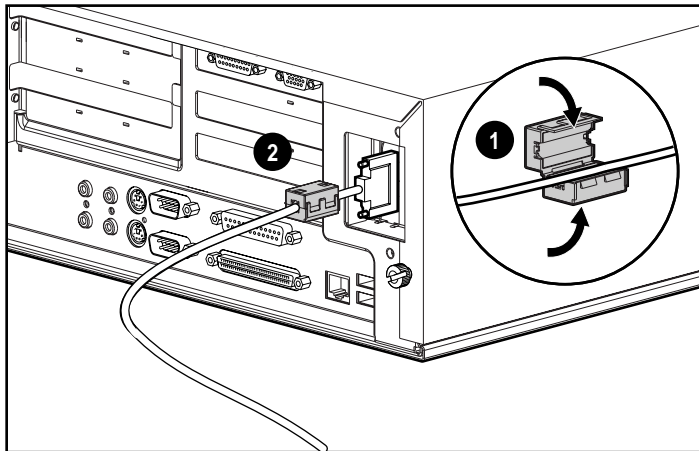

FCC Requirement for Monitor Video Cable—North America Only

To comply with FCC requirements for Class B systems, a workstation equipped with the PowerStorm 300 Graphics Controller option must have a ferrite bead attached to the monitor video cable, about one inch (2.54 cm) from the cable connector.

If the monitor video cable does NOT have a ferrite bead attached, see Figure 1 to attach the ferrite bead included in this bag. If a ferrite bead is already attached to the cable, it is not necessary to install the ferrite bead included here.

Note: A ferrite bead already attached to the cable may look different from the one included here.

Figure 1: Attaching the Ferrite Bead

Open the bead latch and snap the bead into place **1** on the video cable about one inch from the cable connector **2**.
