

PORTswitch 900CP

Installation and Configuration

Part Number: EK-DECPM-IN. A01

May 1995

This document describes how to install and configure the PORTswitch 900CP module.

Revision/Update Information: This is a new manual.

Digital Equipment Corporation makes no representations that the use of its products in the manner described in this document will not infringe on existing or future patent rights, nor do the descriptions contained in this document imply the granting of licenses to make, use, or sell equipment or software in accordance with the description.

Restricted Rights: Use, duplication, or disclosure by the U.S. Government is subject to restrictions as set forth in subparagraph (c)(1)(ii) of DFARS 252.227-7013, or in FAR 52.227.19, or in FAR 52.227-14 Alt. III, as applicable.

The information in this document is subject to change without notice and should not be construed as a commitment by Digital Equipment Corporation. Digital Equipment Corporation assumes no responsibility for any errors that may appear in this document.

The following are trademarks of Digital Equipment Corporation: DEC, DECconnect, DEChub, DEChub ONE, DEChub ONE-MX, Digital, HUBwatch, MultiSwitch, OpenVMS, PORTswitch, ThinWire, and the DIGITAL logo.

FCC NOTICE — Class A Computing Device:

This equipment generates, uses, and may emit radio frequency energy. The equipment has been type tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such radio frequency interference when operated in a commercial environment. Operation of this equipment in a residential area may cause interference; in which case, measures taken to correct the interference are at the user's expense.

VCCI NOTICE — Class 1 Computing Device:

This equipment is in the 1st Class category (information equipment to be used in commercial and/or industrial areas) and conforms to the standards set by the Voluntary Control Council for Interference by Data Processing Equipment and Electronic Office Machines aimed at preventing radio interference in commercial and/or industrial areas. Consequently, when used in a residential area or in an adjacent area thereto, radio interference may be caused to radios and TV receivers.

Read the instructions for correct handling.

CE NOTICE – Class A Computing Device:

Warning!

This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

Achtung!

Dieses ist ein Gerät der Funkstörgrenzwertklasse A. In Wohnbereichen können bei Betrieb dieses Gerätes Rundfunkstörungen auftreten, in welchen Fällen der Benutzer für entsprechende Gegenmaßnahmen verantwortlich ist.

Attention!

Ceci est un produit de Classe A. Dans un environnement domestique, ce produit risque de créer des interférences radioélectriques, il appartiendra alors à l'utilisateur de prendre les mesures spécifiques appropriées.

Safety

Any caution that appears in this manual is defined as follows:

CAUTION Contains information to prevent damage to equipment.

ACHTUNG Enthält Informationen, die beachtet werden müssen, um die Geräte vor Schaden zu bewahren.

ATTENTION Signale les informations destinées à prévenir la détérioration du matériel.

PRECAUCIÓN Contiene información para evitar daños al equipo.

Safety (Cont.)

CAUTION 

This action deletes all configured settings and replaces them with factory default values. All configuration settings will be lost. [Page 3–9.]

ACHTUNG

Bei diesem Vorgang werden alle Konfigurationseinstellungen gelöscht und die Werkseinstellungen wieder eingesetzt. Alle Konfigurationsdaten gehen verloren.

ATTENTION

Cette action supprime tous les paramètres de configuration et les remplace par des valeurs prédéfinies. Tous les paramètres de configuration seront perdus.

PRECAUCIÓN

Esta intervención borrará todos los parámetros de configuración y los sustituirá por valores por defecto definidos de fábrica. Se perderán todos los parámetros de configuración.

Safety (Cont.)

CAUTION 	If power is interrupted during Stage 3 of the DLU process, the firmware image can become corrupted. Do not turn off power to the unit or perform any action that can cause the unit to lose power during Stage 3 of the DLU process. [Pages 3–22, 3–24, 3–25 and 3–28.]
ACHTUNG	Sollte während der Phase 3 des DLU-Prozesses eine Unterbrechung der Stromversorgung eintreten, kann das Firmwareprogramm zerstört werden. Aus diesem Grunde wird dringend empfohlen, Vorkehrungen zu treffen, daß während der Durchführung dieser Phase 3 die Systemeinheit weder ausgeschaltet noch die Stromversorgung unterbrochen werden kann.
ATTENTION	L'image du microprogramme risque d'être corrompue, en cas de coupure de courant au cours de l'étape 3 du processus DLU. Ne mettez pas l'unité hors tension et n'exécutez aucune action risquant d'entraîner une coupure d'alimentation au cours de cette étape.
PRECAUCIÓN	Si se interrumpe el suministro eléctrico durante la Etapa 3 del proceso DLU, puede dañarse la imagen del firmware. No se debe apagar la unidad ni realizar ninguna operación que pueda causar una interrupción del suministro de la unidad durante la Etapa 3 del mencionado proceso.

Preface

About this Manual

Manual Contents

This manual explains how to install and configure the PORTswitch 900CP network module.

Intended Audience

This manual is intended for use by personnel who will install and set parameters for the PORTswitch 900CP.

Structure of this Manual

This manual contains the following chapters and appendixes:

Section	Description
Chapter 1	Provides an overview of the PORTswitch 900CP.
Chapter 2	Describes how to install the PORTswitch 900CP.
Chapter 3	Describes the setup port and how to use it to observe and set module parameters.
Chapter 4	Describes how to remove the PORTswitch 900CP.
Chapter 5	Describes the LED functions and provides problem-solving information.
Appendix A	Provides connector and adapter pin assignment information.
Appendix B	Provides product specifications.
Appendix C	Discusses remote monitor alarms and events.

About This Manual (Cont.)

Conventions Used in this Manual

The following conventions are used in this manual:

Convention	Meaning
Monospaced type	Indicates a literal example of system output.
Boldface type	In examples, indicates user input.
<i>Italics</i>	In examples, indicates a variable. In text, indicates a book title.
[]	Contain default responses to the installation menu prompts.
[<i>n</i>]	Indicates a variable response to the installation menu prompts
Return	Indicates that you press the Return key.
Ethernet	The term used by Digital for its product compatibility with the ISO 8802-3/ANSI/IEEE 802.3 standards and the Ethernet standards for Carrier Sense Multiple Access with Collision Detection (CSMA/CD) local area networks (LANs).
00.00.00.00	This format represents an Internet Protocol (IP) address in examples and figures.
08-00-2B-A3-00-00	This format represents a media access control (MAC) address in examples and figures.

Associated Documents

The following documents provide related information about the PORTswitch 900CP. The back of this book provides ordering information.

Title and Order Number	Description
<i>DEChub 900 MultiSwitch Owner's Manual</i> EK-DH2MS-OM	Provides installation, use, security, and troubleshooting information.
<i>DEChub ONE Installation</i> EK-DEHU2-IN	Provides installation and operation guidelines for single-slot hub configuration, including rack-mounting options and cabling.
<i>DEChub ONE-MX Installation</i> EK-DEF1H-IN	Provides installation and operation guidelines for single-slot hub configuration, including rack-mounting options and cabling.
<i>HUBwatch Installation and Configuration</i> AA-Q3S8D-TE	Provides information for installing and configuring HUBwatch for OpenVMS V4.0 and HUBwatch for Windows V4.0.
<i>HUBwatch Use</i> AA-PW4BE-TE	Provides network management and DEChub 900, DEChub 90 and DEChub ONE functionality information for HUBwatch for OpenVMS.
<i>HUBwatch for Windows Use</i> AA-Q3S3C-TE	Provides network management and DEChub 900, DEChub 90, and DEChub ONE functionality information for HUBwatch for Windows V4.0.
<i>OPEN DECconnect Applications Guide</i> EC-G2570-42	Contains general descriptions to help plan and install networking systems based on Digital Equipment Corporation's OPEN DECconnect system and networking products.

Associated Documents (Cont.)

Documentation Comments If you have comments or suggestions for this book or any of the DEChub documents, you can use the Reader's Comment form on the last page of this document and mail it to the address on the reverse side of the form.

Firmware Updates

Why? Because Digital continuously improves the quality and enhances the functionality of the DEChub products, periodic releases of firmware will become available. To ensure that you have the latest functionality and quality of firmware, always use the current version.

How? Firmware updates are customer installable. You can get information about the latest firmware releases from your local Digital Reseller or your local Digital Sales Office. You can also get this information by reading the `README.txt` file found in the `/pub/DEC/hub900` directory at `ftp.digital.com`.

You can register for automatic notification of new firmware releases using the Internet by sending your name, title, and mailing address to `dechub_notice@lkg.dec.com`.

PORTswitch 900CP Description

Overview

Introduction

This chapter describes the features and components of the PORTswitch 900CP.

The PORTswitch 900CP (also referred to in this manual as the module) is a port-switchable, 16-port, ThinWire, 10Base2 Ethernet repeater. It features advanced management and configuration control.

How Can I Configure the Module?

You can configure the module into a DEChub 900 Multiswitch (referred to in this manual as a DEChub 900) or as a standalone unit into a DEChub ONE or DEChub ONE-MX docking station. Both the DEChub ONE and the DEChub ONE-MX are referred to in this manual as the DEChub ONE.

The PORTswitch 900CP provides the flexibility to logically interconnect any combination of externally accessible ports onto any of six internal LAN segments. This level of configuration control provides flexibility across all of the 16 ports. You can also enable the six internal LANs onto the DEChub 900 flexible backplane channels to give further global expansion of the network through other DEChub network products.

In This Chapter

This chapter covers the following topics:

Topic	See Page
Module Features	1-2
Module Components	1-4

Module Features

Introduction	This section lists the hardware, firmware, and management features of the PORTswitch 900CP module.
Hardware Features	<p>Your module includes the following hardware features:</p> <ul style="list-style-type: none">• Module and network state LEDs.• Momentary LED cycle switch on the front panel, which enables you to observe one bank of port state LEDs at a time.• The 16 10Base2 connectors on the front panel which support BNC connectors with a 50-ohm impedance.• Hot-swap capability when installed into the DEChub 900.• Access to ThinWire 10Base2 segment in the DEChub 900 MultiSwitch or to the AUI port in the DEChub ONE.• Ability to connect internal LANs to any of six flexible channels in the DEChub 900.
Per-port Security	<p>The PORTswitch 900CP enforces eavesdrop prevention and intrusion protection based on the Ethernet MAC addresses of attached stations. It uses access control lists to map authorized addresses to manageable PORTswitch ports. You can enable either or both of these features per port.</p> <p>Eavesdrop Prevention</p> <p>When enabled, this feature prevents unauthorized monitoring of network traffic. Only packets destined for authorized stations are transmitted on the port.</p> <p>Intrusion Protection</p> <p>When enabled, this feature prevents unauthorized stations from successfully transmitting data into a PORTswitch port. The PORTswitch compares the source address of the packets received on a port to the list of authorized addresses assigned to that port. If the addresses do not match, the PORTswitch logs an intrusion violation and can take one of the following actions:</p> <ul style="list-style-type: none">• Converts the remainder of this packet to a jam pattern as it is repeated on that port.• Disables the port that detected the violation.

Module Features (Cont.)

Basic Management Features

Your module includes the following basic management features:

- Upgradeable device firmware (in nonvolatile flash memory) using Trivial File Transfer Protocol (TFTP) with the HUBloader utility from Digital.
- In-band management with SNMP.
- Out-of-band management (OBM), using SNMP over Serial Line Internet Protocol (SLIP) through the OBM connector on the DEChub 900 or the DEChub ONE, in addition to the normal in-band management.
- Manageability using any generic SNMP management application that supports the management information bases (MIBs) listed below.
- Built-in SNMP agent that supports the following MIBs:
 - Remote MONitoring (RMON) alarms and events (RFC 1271)
 - Internet Engineering Task Force (IETF) Repeater (RFC 1516)
 - Ethernet-like Interface Type (RFC 1398)
 - Digital Extended Repeater
 - DEChub 900 Public Common
 - MIB II (RFC 1213)

Management Features with an NMS

The HUBwatch Network Management Station (NMS) application is the recommended tool for managing the modules in the DEChub family. When using an SNMP-based NMS such as HUBwatch, your module includes the following management features:

- User-friendly, advanced, graphical user interface (GUI)
- Port-switching capability in both the DEChub 900 and the DEChub ONE
- Port-level packet-address security

This section describes the components of the PORTswitch 900CP module.

Module Components

Front Panel

Figure 1-1 Front Panel

NPG-0015-951

Module Components (Cont.)

Front Panel The following table describes the front-panel components shown in Figure 1–1.

Figure 1–1 Legend

Item	Icon	Name	Description
1		Power LED	Lights when the module has power. ¹
2		Module OK LED	Lights when the module passes self-test. If the module fails self-test, the module OK LED remains off. ¹
3		Network OK LED	Indicates the status of the backplane ThinWire port on the DEChub 900 or of the AUI port on the DEChub ONE. ¹
4	1 – 8	Port state LEDs	Show the status of one of the two banks of ports, depending on the state of the bank indicator LEDs. ¹
5	A and B	Bank indicator LEDs	Light one at a time for a few seconds, indicating which bank of ports is currently displaying its status on the eight port state LEDs. ¹
6		Momentary LED cycle switch	Enables you to stop and start the LED status scanning of the bank indicator LEDs during operation.
7	1 – 6	Internal LAN LEDs	Indicates which internal LAN has activity and the level of network traffic on each of those LANs. Green indicates the internal LAN is active on the module and front panel ports only. Yellow indicates the internal LAN is connected to a flexible channel on the DEChub 900. ¹
8		Address label	Contains the module's 48-bit Ethernet hardware address.
9	1 – 8	10Base2 port connectors	10Base2 connectors for ports 1 to 16 support BNC connectors.

¹ See Chapter 5 for more information about LED operation.

Module Components (Cont.)

Back Panel

Figure 1-2 Back Panel

NPG-0002-951

Module Components (Cont.)

Back Panel

The following table describes the back-panel components. Figure 1–2 shows an illustration of the back panel.

Figure 1–2 Legend

Item	Name	Description
1	Locking tab	Locks the module into a DEChub 900 backplane or DEChub ONE. It also contains the hot-swap switch lever.
2	48-pin connector	Provides network and power connections to the module when the module is installed into a DEChub 900 or a DEChub ONE docking station.
3	Grounding bolt	Provides a chassis grounding connection between the module and a DEChub 900 or DEChub ONE docking station.
4	Manufacturing label	Lists the module part number, serial number, revision level, and power requirements.
5	160-pin connector	Provides network and power connections to the module when the module is installed into a DEChub 900 or DEChub ONE docking station.
6	Mounting tab	Secures the module to the backplane when the module is installed into a DEChub 900 or DEChub ONE docking station.
7	Grounding fingers	Provide an additional chassis ground connection between the module and a DEChub 900 or DEChub ONE.

Installing the PORTswitch 900CP

Overview

Introduction This chapter describes the tasks necessary to install the module.

What do I Need to Know? **Hot-swap Feature**

The PORTswitch 900CP hot-swap feature allows you to install the module into the DEChub 900 or DEChub ONE without turning off power. Seating the module initiates the power-up sequence if enough power is available.

The 12-Volt Power Source

The 12-volt power in the DEChub 900 is derived from the 15-volt power source. Although it is listed separately in the product specifications, the 12-volt requirements are included in the 15-volt power total.

In this Chapter This chapter describes the tasks necessary to install the module:

Topic	See Page...
Installing the Module	2-2
Connecting the Cables	2-5

Installing the Module

Task 1: Compare the Power Ratings

Compare the module's power ratings with the values shown in the Hub Manager status display.

IF the power values on the module's manufacturing label (1)...

THEN...

Do not exceed the values shown in the Hub Manager status display (2)

Go to Task 2: Seat the Module into the DEChub 900.

Exceed the values shown in the Hub Manager status display (2)

Add another power supply to the DEChub 900.¹

¹ See the *DEChub 900 MultiSwitch Owner's Manual*.

Figure 2-1 Comparison of Power Ratings

MPG-0016-951

Installing the Module (Cont.)

Task 2: Seat the Module into the DEChub 900.

To seat the module, complete the following steps:

Step	Action
1	Place the module's mounting tab into the mounting slot on the DEChub 900 (1).
2	Pull up the release lever to its unlocked position (2).
3	Pivot the module on the mounting tab and align the connectors.
4	Firmly push the module onto the backplane connectors.
5	Press down on the release lever to ensure that the module is locked (3).

Figure 2-2 Seating the Module

NPG-0146-951

Installing the Module (Cont.)

Task 3: Verify Initial LED Operation

Seating the module initiates the power-up sequence as follows:

Stage	Description
1	The DEChub 900 Hub Manager determines whether enough power is available.
	■ If enough power is available, the Hub Manager allocates power to the module. The module's power Ⓜ LED lights, and the module runs a self-test.
	■ After the module completes self-test (within one minute), the module OK Ⓞ LED lights and remains lit. The Hub Manager status display shows: PORTswitch 900CP up.

Figure 2-3 LED Verification

NPG-0017-951

Note

If the LEDs do not operate as described, refer to Chapter 5, Problem Solving.

Connecting the Cables

What Type of Cables Should I Use?

The PORTswitch 900CP module's 10Base2 port connectors support ThinWire cables with 50-ohm impedance and BNC connectors.

Note

Each port has an internal 50-ohm terminator. This is one of the two terminators required on each 10Base2 segment.

Task 5: Connect the Cables

To connect the cables, complete the following steps:

Step	Action
1	Attach the ThinWire cable to the BNC connector, and turn the connector one-quarter turn to the right until the connector locks into place.
2	Attach the other end of the ThinWire cable to either a properly terminated 10Base2 device or to a terminator.

Figure 2-4 Connecting the Cables

NPG-0195-951

Configuring the Module

Overview

Introduction This chapter describes how to access the setup port to configure the module and the configuration options that you may choose.

Conventions In this chapter, **boldface type** in examples indicates user input. The format of an IP address is the standard 4-octet dotted decimal notation, where each octet of the address is represented as a decimal value, separated by a decimal point (.). The following is an example of an IP address: 16 . 20 . 54 . 156

In This Chapter This chapter covers the following topics:

Topic	See Page
Setup Port Description	3-2
Accessing the Setup Port	3-4
PORTswitch 900CP Installation Menu (DEChub 900 Options)	3-7
PORTswitch 900CP Installation Menu (DEChub ONE Options)	3-8
Descriptions of Menu Options	3-9
Downline Upgrade	3-22

Setup Port Description

Introduction

The setup port (on the DEChub 900 or the DEChub ONE) allows you to access and set PORTswitch 900CP parameters. This section describes how to access the module from either setup port and how to set those parameters.

Examples of the setup screen displays in this section aid in the description of the setup port and display the available options. Because they are examples only, the displays can vary slightly from the actual screen displays on your setup port device.

Signaling Standards

The signals from the DEChub 900 Hub Manager setup port and the DEChub ONE setup port conform to the EIA-232D signaling standard at 9600 baud. To the user, the port appears as a data terminal equipment (DTE) device.

The DEChub 900 Hub Manager setup port is compatible with devices that use the EIA-423 signaling standard.

Setup Port Cabling

The setup port (see Figure 3-1) on the DEChub 900 or the DEChub ONE can be connected to a setup port device (a terminal or personal computer) by using the following cables and adapters.

IF the setup port device is...	THEN use this cable...	WITH this adapter...
A PC with a 9-pin D-Sub communications port	BN24H-xx ¹	H8571-J
A terminal with a 25-pin D-Sub connector	BN24H-xx ¹	H8575-A
A terminal with a 6-pin MMJ connector	BN24H-xx ¹	Not required

¹ xx indicates cable length in meters.

Setup Port Description (Cont.)

3	Setup port device

Accessing the Setup Port

Accessing the Setup Port

To access the setup port, complete the following steps:

Step	Action
1	Ensure that the transmit and receive baud rates on the setup port device are set to 9600 baud.
2	Connect the setup port device to the setup port connector on either the DEChub 900 or the DEChub ONE.
3	Press <input type="text" value="Return"/> on the setup port device a few times until the menu appears.
4	Do the following:
IF the module is installed into a...	THEN this menu appears... Go to the section titled...
DEChub ONE	PORTswitch 900CP INSTALLATION MENU PORTswitch 900CP INSTALLATION MENU (DEChub ONE Options)
DEChub 900	DEChub 900 MultiSwitch INSTALLATION MENU DEChub 900 INSTALLATION MENU

Accessing the Setup Port (Cont.)

DEChub 900 Installation Menu The following example shows the DEChub 900 MultiSwitch INSTALLATION MENU:

```
DEChub 900 MultiSwitch
=====
DEChub 900 MultiSwitch INSTALLATION MENU

[1] Reset with Factory Defaults
[2] Reset with Current Settings
[3] Show Current Settings
[4] Configure IP...
[5] Dump Error Log
[6] Downline Upgrade
[7] Configure Out-of-Band Port...
[8] Start Event Display Mode
[9] Start Redirect Mode

=====

Enter selection number: 9 
```

Accessing the Setup Port (Cont.)

The Start Redirect Mode Option

This option redirects the DEChub 900 Hub Manager setup port to any network module (such as the PORTswitch 900CP) that is installed into the DEChub 900. Choosing this option allows you to configure or obtain the status of an installed network module by accessing the module's installation menu.

After you choose the Start Redirect Mode option from the DEChub 900 MultiSwitch INSTALLATION MENU, the screen prompts you for a slot number as shown in the following example.

The following example shows how to select a slot number.

```
Enter selection: 9
=====
Enter the slot number for redirection (1-8): [n] 
Console redirected to 3: PORTswitch 900CP
Attempting connection [Ctrl/C to abort]...
```

After you press , the console redirects to the PORTswitch 900CP INSTALLATION MENU.

PORTswitch 900CP Installation Menu (DEChub 900 Options)

This section shows the options available from the PORTswitch 900CP INSTALLATION MENU when the module is installed into the DEChub 900.

The indication at the top of the screen, slot 3, refers to the DEChub 900 slot number where the module is installed.

The following example shows the PORTswitch 900CP INSTALLATION MENU operating in a DEChub 900 configuration:

```
PORTswitch 900CP - slot 3
=====
          PORTswitch 900CP INSTALLATION MENU

[2]  Reset with Current Settings
[3]  Show Current Settings
[4]  Configure IP...
[5]  Dump Error Log
[6]  Downline Upgrade

[Ctrl/C] Return to Hub Manager Installation Menu
=====

Enter selection number : [n] 
```

Go the section titled Description of Menu Options.

PORTswitch 900CP Installation Menu (DEChub ONE Options)

This section shows the options available from the PORTswitch 900CP INSTALLATION MENU when the module is installed standalone into the DEChub ONE.

The following example shows the PORTswitch 900CP INSTALLATION MENU operating in a DEChub ONE configuration:

```
PORTswitch 900CP
=====
      PORTswitch 900CP INSTALLATION MENU

[1]  Reset with Factory Defaults
[2]  Reset with Current Settings
[3]  Show Current Settings
[4]  Configure IP...
[5]  Dump Error Log
[6]  Downline Upgrade
[7]  Configure Out-of-Band Port...
=====

Enter selection number: [n] 
```

Descriptions of Menu Options

Introduction

This section describes the options that are available from the `PORTswitch 900CP INSTALLATION MENU`. Note that the out-of-band menu options apply to the module only when it is in standalone mode (configured in a DEChub ONE).

[1] Reset with Factory Defaults

This option reboots the module, causing the module's configured nonvolatile random access memory (NVRAM) parameters to be initialized to factory default values.

Caution

This action deletes all configured settings and replaces them with factory default values. All configuration settings will be lost.

If you need to reboot the module and retain the current settings, choose Option [2] from the `PORTswitch 900CP INSTALLATION MENU`.

Table 3-1 lists examples of the module's NVRAM parameters and tells how the selection of this option affects each parameter.

Table 3-1 Effect of Reset with Factory Defaults

Parameter	Effect
SNMP read/write community	Name reset to PUBLIC .
SNMP trap addresses	Deleted
In-band interface IP address	Deleted
In-band interface default gateway address	Deleted
Out-of-band interface IP address	Deleted
Out-of-band interface port speed	Reset to 9600
Serial number	No effect ¹
Reset count	No effect ¹
Error log data	No effect ¹
RTS	Set to Disabled

¹ These are the *only* parameters that are *not* reset with factory defaults.

Descriptions of Menu Options (Cont.)

[1] Reset with Factory Defaults (Cont.)

Note

Allow approximately 1 minute for the module to reset and complete self-test.

The following example shows the dialog associated with this option:

```
Enter selection : 1
PORTswitch 900CP - slot 3
=====
                RESET WITH FACTORY DEFAULTS
* * * * *
*   IMPORTANT!           IMPORTANT!           IMPORTANT!   *
* * * * *
* This selection will delete the current configuration *
* settings and reset the system with the factory default *
* settings. All configuration settings will be lost.      *
* * * * *
=====
                Press Y to confirm [N] : 
                Press Return for Main Menu ...
```

Descriptions of Menu Options (Cont.)

[2] Reset with Current Settings

This option reboots the module but leaves the module's configured NVRAM parameters at their current values.

Note

Allow approximately 1 minute for the module to reset and complete self-test.

The following example shows the dialog associated with this option:

```
Enter selection : 2
PORTswitch 900CP - slot 3
=====
                RESET WITH CURRENT SETTINGS
This selection will reset your system with the
current configuration settings.
=====
Press Y to confirm [N] : 
Press Return for Main Menu ...
```

Descriptions of Menu Options (Cont.)

[3] Show Current Settings

This option shows the module's current settings.

Note

If the module is being configured for the first time, some fields are blank.

The following example shows the display associated with this option:

```

Enter selection : 3

PORTswitch 900CP - slot 3

The following seven pages describe the IP configuration options.

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[1] Set SNMP Read/Write Community

This option prompts you to enter the module's read/write community name.

The factory default of this menu option sets the read/write community name to `public`.

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 1
PORTswitch 900CP - slot 3
=====

                                SET SNMP READ/WRITE COMMUNITY

Format:  The format for a community name is a string,
          consisting of 4 to 31 printable ASCII characters,
          that describes the relationship between an SNMP
          agent and one or more SNMP managers. The string
          defines the authentication mechanism that is employed
          to validate the use of the community by the sending
          SNMP entity.

=====

Enter the Community String [public] : shamrock80 
SNMP Read/Write community string set.
Press Return for IP Configuration Menu ...
```

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[2] Add SNMP Trap Addresses

This option prompts you to enter IP addresses to which the PORTswitch 900CP module will send SNMP traps.

An SNMP trap address must be set to enable the alarms and events group of the Remote MONitoring (RMON) MIB. (Refer to Appendix B for more information.)

If an SNMP trap address was previously configured, the screen displays the SNMP trap address.

The factory default of this menu option deletes all SNMP trap addresses.

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 2
PORTswitch 900CP
=====
                                ADD SNMP TRAP ADDRESSES

Format:  The standard 4 octet dotted decimal notation in which
          each octet of the address is represented as a decimal
          value, separated by '.' character.

                                example: 16.20.40.156
=====

Trap address [ ] : 16.20.40.157 

Trap address added! Add another? [none] : 

                                Press Return for IP Configuration Menu ...
```

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[3] Delete SNMP Trap Addresses This option prompts you to select SNMP trap addresses for deletion from the community trap address table.

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 3
PORTswitch 900CP - slot 3
=====

                                DELETE SNMP TRAP ADDRESSES

Format:  The standard 4 octet dotted decimal notation in which
          each octet of the address is represented as a decimal
          value, separated by '.' character.

                                example: 16.20.40.156
=====

Configured SNMP Trap Addresses: 16.20.40.156
                                Trap address [ ] 16.20.40.156 
Trap address deleted. Delete another? [none] : 

                                Press Return for IP Configuration Menu ...
```

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[4] Set In-Band Interface IP Address

This option prompts you to enter the module's in-band IP address.

If an IP address was previously configured, the screen displays an in-band IP address, subnet mask, and default gateway.

The factory default setting is no IP address.

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 4
PORTswitch 900CP - slot 3
=====

IN-BAND INTERFACE IP ADDRESS CONFIGURATION

Format:  The standard 4 octet dotted decimal notation in which
         each octet of the address is represented as a decimal
         value, separated by '.' character.

         example: 16.20.40.156

To delete the address, enter 0 in the appropriate address
field.

Interface  IP Address    Subnet Mask    Def.Gatewa    Other Info
Ethernet                                08-00-2B-B1-4D-C7

Enter the Subnet Mask [ ] : 

Enter the Default Gateway [ ] : 

Press Return for IP Configuration Menu ...
```

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[5] Set Out-of-Band Interface IP Address

This option prompts you to enter an out-of-band IP address and a subnet mask.

Note

This selection is operational only when the module is in standalone mode (when it is installed into a DEChub ONE).

If an IP address was previously configured, the screen displays an out-of-band IP address and subnet mask.

The factory default setting is no IP address.

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 5
PORTswitch 900CP
=====

                                IP ADDRESS CONFIGURATION

Format:  The standard 4 octet dotted decimal notation in which
         each octet of the address is represented as a decimal
         value, separated by '.' character.
         example: 16.20.40.156

To delete the address, enter 0 in the appropriate address field.
Interface  IP Address  Subnet Mask  Def.Gatewa  Other Info
Ethernet  16.20.156.24
OBM Port  16.20.158.26                               Speed 9600 bps
=====

Enter IP address   : 16.20.54.155  
Enter Subnet Mask  : 

Press Return for IP Configuration Menu ...
```

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[5] Set Out-of-Band Interface IP Address (Cont.)

Note

To enable out-of-band management, you must also select an out-of-band management (OBM) port speed from the PORTswitch 900CP INSTALLATION MENU
Option [7] Configure Out-Of-Band Port
Submenu option [1] Set Port Speed

See the *DEChub ONE Installation* manual or the *DEChub ONE-MX Installation* manual for OBM port cabling information.

Descriptions of Menu Options (Cont.)

[4] Configure IP (Cont.)

[6] Enable/ Disable BootP

This option prompts you to enable or disable Bootstrap Protocol (BootP) requests from the module.

Note

This selection appears as submenu option [5] when the module is installed into a DEChub 900.

The factory default setting is DISABLED.

The following example shows the dialog associated with this option:

```
=====
Enter selection : 6

PORTswitch 900CP
=====

ENABLE/DISABLE BOOTP

BOOTP is the IP bootstrap protocol. BOOTP may be used
to obtain the module's IP address, subnet mask, and default
gateway. When BOOTP in Enabled and the module is not configured
with an IP address the module will send out BOOTP requests
until it receives a response or is manually configured with
an IP address. When BOOTP is disabled, no BOOTP requests will
be sent.

The BOOTP server must be properly configured to return the
address information.
=====

The BOOTP process is DISABLED
Would you like to ENABLE BOOTP Y/[N]
Press Return for Main Menu ...
```

Descriptions of Menu Options (Cont.)

[5] Dump Error Log

This option displays error log dumps for use by Digital support personnel when analyzing system faults. Up to four error log dumps can be stored; the most recent dump is displayed first.

When the firmware has been upgraded to a new version, the version number is entered into the error log.

The following example shows the display associated with this option:

```
Enter selection : 5
PORTswitch 900CP - slot 3
=====
DUMP ERROR LOG
CURRENT RESET COUNT: 14
=====
Entry      = 3
Timestamp  = 0   0   791
Reset Count = 13
FW upgraded: to v2.0

Dump another entry Y/[N]? N 
=====
No more Error Log entries

Press Return for Main Menu ...
```

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade

This option allows you to upgrade the module's firmware (in nonvolatile flash memory). It prompts you to enter the load image file name and the IP address of your Trivial File Transfer Protocol (TFTP) load host.

The Downline Upgrade (DLU) Process

Caution

If power is interrupted during Stage 3 of the DLU process, the firmware image can become corrupted. Do not turn off power to the unit or perform any action that can cause the unit to lose power during Stage 3 of the DLU process.

The DLU process consists of four stages:

Stage	Description
1	Transferring firmware image
2	Verifying firmware image
3	Writing new firmware image into nonvolatile flash memory
4	Module reset and self-test

Table 3-2 explains what happens during each stage of the DLU process:

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

Table 3–2 DLU Process Description

Stage	What Happens
1	<p>The new firmware image from the TFTP load host is transported across the network and placed into a temporary storage buffer in the module.</p> <p>This stage normally takes 1 minute to complete. However, due to variations in network configurations (load path and traffic levels), this stage can take 10 minutes or more.</p> <p>The following states indicate that this stage is in progress:</p> <ul style="list-style-type: none">• Module status — functional and manageable.• Module can respond to management requests.• LED display — the power  LED and the module OK  LED remain on. All other LEDs remain in the state they were in before the DLU process began.• Hub Manager display — PORTswitch 900CP up
2	<p>The module verifies that the firmware image is correct after Stage 1 is complete.</p> <p>This stage normally takes 10 seconds to complete.</p> <p>The following states indicate that this stage is in progress:</p> <ul style="list-style-type: none">• Module status — functional and manageable.• Module can respond to management requests.• LED display — The power  LED and the module OK  LED remain on. All other LEDs remain in the state they were in before the DLU process began.• Hub Manager display — PORTswitch 900CP up

(continued on next page)

Descriptions of Menu Options (Cont.)

Table 3–2 DLU Process Description (Cont.)

Stage	What Happens
3	<p>The new firmware image is transferred from the module’s temporary storage buffer to the flash RAM, overwriting the old firmware image.</p> <hr/> <p style="text-align: center;">Caution </p> <hr/> <p>If power is interrupted during Stage 3 of the DLU process, the firmware image can become corrupted. Do not turn off power to the unit or perform any action that can cause the unit to lose power during Stage 3 of the DLU process.</p> <hr/> <p>This stage normally takes less than 1 minute to complete. The following states indicate that this stage is in progress:</p> <ul style="list-style-type: none"> • Module status — functional, but not manageable. • Module cannot respond to management requests. • LED display — the power  LED remains on. The module OK  turns off. The port state LED #4 lights. All other LEDs turn off. • Hub Manager display — <code>PORTswitch 900CP</code> <code>unknown</code> <p>After the transfer is complete, the #5 port state LED lights for up to 22 seconds while the module awaits a reset.</p>
4	<p>The module resets, runs self-test, and then begins executing the new firmware image.</p> <p>This stage normally takes 1 minute to complete. The following states indicate that this stage is in progress:</p> <ul style="list-style-type: none"> • Module status — not functional during reset and self-test. • Module cannot respond to management requests. • The power  LED remains on. The module OK  LED and the #5 port state LED turn off. The LEDs display the self-test sequence. • Hub Manager display — <code>PORTswitch 900CP</code> <code>unknown</code> <p>After the successful completion of self-test, the module OK  LED turns on and the module becomes fully operational and manageable. Note also that the HUB Manager display indicates:</p> <p><code>PORTswitch 900CP</code> <code>up</code></p>

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

Using the DLU Process

The following section explains how to use the DLU process.

Caution

If power is interrupted during Stage 3 of the DLU process, the firmware image can become corrupted. Do not turn off power to the unit or perform any action that can cause the unit to lose power during Stage 3 of the DLU process.

You can perform the downline upgrade in one of the following ways:

IF the module has...	AND is installed into a...	THEN you can...
Been assigned an IP address	DEChub 900 or DEChub ONE	Use the module's IP address.
Not been assigned an IP address	DEChub 900	Use the IP address of the DEChub 900 Hub Manager ¹ .
	DEChub 900 ¹ or DEChub ONE	Use out-of-band management through the OBM port over Serial Line Interconnect Protocol (SLIP). Assign an IP address. Refer to Option [4].

¹ Refer to the *DEChub 900 MultiSwitch Owner's Manual* for more information.

The module's IP address is retained at the completion of the downline upgrade process.

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

Using the DLU Process (Cont.)

The following example shows a load image file name and an IP address:

decpmv20.bin and 16.20.54.156

The format of the firmware image file name is specified according to the conventions used by your TFTP load host.

When you select this option, the initial setup screen display appears. (See the following example display.) This screen identifies the option and alerts users not to interrupt power during the downline load.

```
Enter selection : 6
PORTswitch 900CP

=====
                        DOWNLINE UPGRADE

This process upgrades the device's firmware (in
nonvolatile Flash memory). Enter the IP address of
your TFTP (Trivial File Transfer Protocol) load host
and the image file name when prompted.

* * * * *
*      IMPORTANT!           IMPORTANT!           IMPORTANT!      *
* * * * *
*   If power is interrupted during the downline load, the   *
*   firmware image can be corrupted. Do not turn off power  *
*   to the unit or perform any action that can cause the   *
*   unit to lose power during a downline upgrade.          *
* * * * *

=====

... Press Return Key to Continue ...
```

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

Using the DLU Process (Cont.)

After you press , the screen prompts you to Enter the Load File Name in the following format:

IF the file is...	THEN enter...
Located in the default TFTP directory	Only the file name.
Not located in the default TFTP directory	The complete path name along with the file name.

The following example shows the dialog associated with this option for a file that is located in the default directory:

```
Enter the Load Filename [ ] decpmv20.bin 
```

After you enter the firmware image file name and press , the screen prompts you to enter the IP address of the TFTP server (load host):

```
Enter the Load Host IP Address [ ] :16.20.54.156 
```

After you enter the load host IP address and press , the following screen and dialog appear:

```
Load will be initiated over the Ethernet Port network interface.
The device becomes nonfunctional for up to 10 minutes during the time that the flash load is in progress.
When the load is complete the screen displays the message:
(Device Not Responding!) This is normal.
... Press Return Key to Start Load [Ctrl/C to abort]...
```

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

Using the DLU Process (Cont.)

When you press `[Return]`, the DLU process is initiated over the LAN that is connected to the load host.

Note

The PORTswitch 900CP is nonfunctional only during reset and self-test (about 1 minute of Stage 4) of the DLU process. During the first three stages of the process, the module continues to function as a repeater.

After you initiate the DLU process, the screen displays the following message:

```
DLU process started!  
.....
```

The series of dots (.) indicates that the load is in progress.

Due to variations in network configurations (load path and traffic levels), this initial stage of the DLU process can take up to 10 minutes to complete.

Caution 

If power is interrupted during Stage 3 of the DLU process, the firmware image can become corrupted. Do not turn off power to the unit or perform any action that can cause the unit to lose power during Stage 3 of the DLU process.

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

Using the DLU Process (Cont.)

After the firmware image is loaded into the module's temporary storage buffer and the new firmware image is validated, the DLU process overwrites the old firmware image in the module's flash RAM with the new firmware image.

IF your module is installed into a...	THEN go to...
DEChub ONE	The section titled DLU Process Completion
DEChub 900	The following section, DEChub 900 Hub Manager Indications

DEChub 900 Hub Manager Indications

Because the module is nonfunctional during the flash load process, communications between the module and the Hub Manager cannot take place. Therefore, the setup screen display shows the following messages:

```
Module removed! Connection closed!
```

This is normal.

The Hub Manager status display shows the following:

Hub Manager Status Display

```
3: PORTswitch 900CP
unknown
```

This is normal. The Hub Manager status display continues to display this message until the DLU process is complete.

Descriptions of Menu Options (Cont.)

[6] Downline Upgrade (Cont.)

DLU Process Completion

When the DLU process is complete, the module resets and initiates self-test. After self-test completes successfully, the module exits from the DLU process and begins the execution of the new firmware image. The module OK  LED turns on, and the module becomes fully operational.

The screen displays one of the following:

IF the module is installed into a...	THEN the screen displays...
DEChub ONE	The PORTswitch 900CP INSTALLATION MENU
DEChub 900	The following message: <pre>Press Return for Main Menu...</pre>

When you press , the screen displays the DEChub 900 INSTALLATION MENU.

Verifying the DLU

When the DLU process has completed, select Option [3] Show Current Settings from the PORTswitch 900CP INSTALLATION MENU. When the process has completed successfully, the screen displays the following:

```
Status of Last Downline Upgrade           :      TFTP Read
                                           Transfer Complete
```

Descriptions of Menu Options (Cont.)

[7] Configure Out-of-Band Port

This option provides you with two configuration selections; set port speed and enable/disable RTS.

Note

This option is operational only when the module is in standalone mode (when it is installed into a DEChub ONE).

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 7
PORTswitch 900CP
=====
                                OUT-OF-BAND PORT CONFIGURATION
[1] Set Port Speed
[2] Enable/Disable RTS
[3] Return to Main Menu
=====
Enter selection number : [n] 
```

Descriptions of Menu Options (Cont.)

[7] Configure Out-of-Band Port

[1] Set Port Speed

This option prompts you to select the speed of your OBM port.

Note

This option is operational only when the module is in standalone mode (when it is installed into a DEChub ONE).

The OBM port speed that you select must match the speed of your OBM device. The port speed must be the same at each end of the communications link.

The factory default for this option is 9600.

The following example shows the dialog associated with this option:

```
=====
                                Enter selection : 1
PORTswitch 900CP
=====

          SET OUT-OF-BAND MANAGEMENT INTERFACE PORT SPEED
                [1] 2400 baud
                [2] 9600 baud
                [3] 19200 baud
                [4] 38400 baud
=====

Enter selection number [2] (9600) :4 
          OBM port speed set.

          Press Return for Main Menu ...
```

Descriptions of Menu Options (Cont.)

[7] Configure Out-of-Band Port

[2] Enable/ Disable RTS

This option prompts you to enable or disable the request-to-send (RTS) signal line on the OBM port.

Note

This option is operational only when the module is in standalone mode (when it is installed into a DEChub ONE).

When you enable this option, the RTS signal on the OBM port is active only when data is being transmitted to the OBM port. When you disable this option, RTS is always active.

The factory default of this menu option is disabled.

The following example shows the dialog associated with this option:

```
=====
                          Enter selection : 2
PORTswitch 900CP
=====

                          ENABLE/DISABLE RTS

Enable/Disable Request To Send (RTS) allows additional
control to modem communications. When the RTS option is
Disabled the RTS signal on the OBM port is asserted
after self-test is completed and left asserted. When
the RTS option is Enabled the RTS signal is asserted
only when there is data to be transmitted and deasserted
after the data has been transmitted.

=====

RTS is Disabled. Would you like to Enable RTS? [N]

                          Press Return for Main Menu ...
```

Removing the PORTswitch 900CP

Overview

Introduction This chapter describes the tasks necessary to remove the module.

In This Chapter This chapter covers the following topics:

Topic	See Page
Disconnecting the Cables	4-2
Unseating the Module	4-3

Disconnecting the Cables

Task 1: Disconnect the Cables

To disconnect the cables, complete the following steps:

Step	Action
1	Turn the connector one-quarter turn to the left until the connector clears the BNC connector stem.
2	Disconnect the cable.

Figure 4–1 Disconnecting the Cables

NPG-0019-95I

Unseating the Module

Task 2: Unseat the Module

To unseat the module, complete the following steps:

Step	Action
1	Lift the release lever located on the top of the DEChub 900 slot (1).
2	While holding up the release lever, pivot the module back on its bottom mounting tab (2).
3	Lift the module from the backplane (3).

Figure 4-2 Unseating the Module

NPG-0147-951

Problem Solving

Overview

Introduction

This chapter describes the module LED states and provides troubleshooting information.

The module LEDs provide dynamic indications of module status.

In This Chapter

This chapter covers the following topics:

Topic	See Page
LED Descriptions	5-2
Problem Solving Using the LEDs	5-4

LED Descriptions

LED Indications

Table 5–1 lists the static states that are possible for each of the module LEDs.

Table 5–1 Module LED States

LED Name	Icon	Off	On	Flashing
Power		No power to the module.	Module receiving power.	Faulty power connection or insufficient power.
Module OK		After 1 minute, self-test failed.	Module passed self-test.	Fan failure.
Network OK		Module is not connected to a properly terminated and operational LAN through the ThinWire 10Base2 port on the DEChub 900 or through the AUI port on the DEChub ONE, or there is a repeater loop.	Module is connected to a properly terminated and operational LAN through the ThinWire 10Base2 port on the DEChub 900 or through the AUI port on the DEChub ONE.	ThinWire 10Base2 port or DEChub ONE AUI port is disabled by network management.
Port state	1 through 8	Associated port is not connected to a properly terminated cable.	Associated port is connected to a properly terminated cable.	Flashing once per second indicates that the associated port is disabled by network management.

LED Descriptions (Cont.)

LED Indications (Cont.)

Table 5–1 Module LED States (Cont.)

LED Name	Icon	Off	On	Flashing
Bank indicator	A and B	Associated bank is not currently displaying its port connection status on the 8 port state LEDs.	Associated bank is currently displaying its port connection status on the 8 port state LEDs.	N/A.
Internal LAN	1 through 6	The associated internal LAN has no activity.	Green indicates the internal LAN exists only on the module. Yellow indicates the internal LAN is connected to the flexible channel of the DEChub 900 backplane.	Flashes more rapidly and appears brighter as network traffic increases on the associated LAN.

Normal Powerup

When power to the module is initially turned on, the following events occur:

Stage	What Happens
1	The Power  LED lights and remains lit. All other LEDs except the module OK  LED light and then turn off. This verifies that the individual LEDs are operational.
2	The module initiates self-test. The module OK  LED turns off and remains off. The remaining LEDs display the self-test sequence.
3	After the successful completion of self-test (within 1 minute), the module OK  LED lights and remains lit.
4	The remaining LEDs indicate their operational status.

Problem Solving Using the LEDs

Combined LED States	When diagnosing a problem with the module, note that the problem is often indicated by the combined states of the module LEDs
Individual LED States	Table 5–2 lists the states of the LEDs for various error conditions and suggests corrective actions.

Table 5–2 Problem Solving Using the LEDs

Symptom	Icon	Probable Cause	Corrective Action
All LEDs are off.		The module does not have power.	<p>If installing the module into a DEChub 900, check the power status on the Hub Manager status display.</p> <p>If enough power is available, lift the release lever and reseal the module.</p> <p>If installing the module into a DEChub ONE, ensure that the locking L-bracket screw is locked securely.</p> <p>Remove the module and inspect the module's 48-pin and 160-pin connectors for bent or broken pins.</p> <p>If any pins are broken or bent, replace the module.</p> <p>If no pins are broken or bent, reinstall the module.</p> <p>If the problem persists, replace the module.</p>
Power LED is off.		Faulty power LED.	Replace the module.

Problem Solving Using the LEDs (Cont.)

Individual LED States (Cont.)

Table 5–2 Problem Solving Using the LEDs (Cont.)

Symptom	Icon	Probable Cause	Corrective Action
Module OK LED is off.	☺	Self-test is in progress. Self-test failed.	Wait up to 1 minute for self-test to complete. If the LED does not light after 1 minute, reseal the module to repeat the self-test. If self-test fails again, replace the module.
Module OK LED is flashing.	☺	Fan is faulty.	Contact your Digital service representative to replace the fan.
Network OK LED is off.	#	There is a repeater loop.	Check the redundant links for proper configuration. Check HUBwatch for a configuration error.
Port state LED is off.		Associated port is not connected to a properly terminated cable.	Connect the associated port to cable that is properly terminated. Reseat the cable. Check the termination. If problem persists, replace the cable.
Port state LED is flashing about once per second.		Associated port is disabled by network management.	Enable the associated port, if necessary. Use HUBwatch to check the security log.
Internal LAN LEDs are off.		No front-panel ports are mapped to an internal LAN, or there is no network traffic.	N/A

Connector Pin Assignments

Introduction

This appendix shows detailed illustrations of the connectors, cables, and adapters used on the PORTswitch 900CP.

H8223 T-Connector

Figure A-1 the H8223 T-connector. This connector joins ThinWire cable sections and provides a ThinWire BNC-style station attachment point. It is installed on a ThinWire BNC-style end connector.

Figure A-1 T-Connector

NPG-4720-95I

H8222 End Connector

Figure A-2 shows the H8222 end connector. This connector is a field-installable end connector for ThinWire cable.

Figure A-2 End Connector

NPG-4697-95I

H8224 Barrel Connector

Figure A-3 shows the H8224 barrel connector. This connector joins ThinWire cable sections.

Figure A-3 Barrel Connector

NPG-5384-95I

H8225 50-Ohm Terminator

Figure A-4 shows the H8225 50-ohm terminator. This terminator terminates a ThinWire Ethernet segment. It is installed on a ThinWire T-connector or barrel connector.

Figure A-4 50-Ohm Terminator

NPG-5383-95I

H8571-J Adapter

Figure A-5 shows the H8571-J adapter (6-pin MMJ connector to 9-pin D-Sub connector) and its pin assignments:

Note that EOS/ESD protection devices are not shown on the diagram.

Remote Monitor Alarms and Events

Overview

Introduction

This appendix provides an overview of the PORTswitch 900CP remote monitor (RMON) alarms and events feature.

RMON alarms and events implement a subset of the RMON management information base (MIB) groups based on the IETF draft standard MIB specified by RFC1757, where the primary purpose is to function within the PORTswitch 900CP, and not operate as an RMON probe. The RMON MIB groups include RMON Alarms and RMON Events.

Alarms and Events Description

The Portswitch 900CP implements the RMON alarms and events groups. You can use the alarms and events to monitor MIB objects within the module. The alarms group specifies objects and thresholds you can sample. When the value of a MIB object reaches its threshold, an event is generated.

You can use an SNMP application to create alarm and event table entries. The module is configured with nine default alarms and events that you can modify or delete.

The following two sections describe the alarms and events groups.

Alarms and Events Groups

RMON Alarms Group

The RMON alarms group samples variables from the PORTswitch 900CP and compares them to preconfigured and configurable thresholds. An alarm table stores configuration values of MIB objects for the polling frequency, thresholds, alarm types, and the events to be generated when an alarm exceeds its threshold.

Using the RMON alarms group, you can selectively monitor any integer-like object associated with the PORTswitch 900CP.

RMON Events Group

The RMON events group controls the generation and notification of events of the PORTswitch 900CP. Each entry in the eventTable describes parameters of the event that can be activated. Events are activated by alarms configured in the alarms group. You can specify, at your option, that a log entry is created for each eventEntry whenever the event occurs. You can also specify event notification trap messages for each entry. The RMON events group supports the risingAlarm and fallingAlarm event traps.

Configured Alarms and Events

Default Alarms and Events The PORTswitch 900CP RMON alarms and events MIB is configured with nine alarms and events. Table B–1 describes the PORTswitch 900CP configured alarms and events.

Table B–1 Configured RMON Alarms and Events

This Alarm Message...	Means...
An environmental change occurred	The module has a fan failure or overheating condition.
Port autopartitioned or operational	One or more ports has been autopartitioned, or a port that was previously autopartitioned is now operational.
NVRAM full	There is no more memory for nonvolatile parameters.
Health text changes	The module's operational state has changed.
Total ports events	The total number of times a port has become nonoperational, autopartitioned, or unavailable.
Total repeater errors	The total number of errors for this module.
Security violation	A security violation has occurred on one or more ports.
Media available or unavailable	One or more media have become available or unavailable.

User-defined Alarms and Events In addition to the nine default alarms and events, you can also configure RMON alarms and events on any integer-like object supported by the module.

C

Product Specifications

Introduction This appendix lists operating and acoustical specifications.

Operating Specifications Table C-1 lists the PORTswitch 900CP environmental specifications.

Table C-1 PORTswitch 900CP Operating Specifications

Parameter	Specification
<i>Operating Environment</i>	
Operating temperature ¹	5°C to 50°C (41°F to 122°F)
Relative humidity	10% to 95% noncondensing
Altitude	Sea level to 4900 m (16,000 ft)
Power	47.5 W, total power 8.0 A, 5Vdc, 0.1 A, 12Vdc ² 0.5 A, 15Vdc

Connectors

Module has 16 10Base2 ports.

DEChub ONE has one 8-pin MJ, one DB-9, and one 15-pin D-Sub AUI connector

DEChub ONE-MX has: one 8-pin MJ, one 6-pin MJ (OBR), one DB-9, one 15-pin D-Sub, and one redundant power connector (D-sub).

¹ For sites above 4900 m (16,000 ft), decrease the operating temperature specification by 1.8°C for each 1000 m or 3.2°F for each 3200 ft.

² The 12V power in the DEChub 900 is derived from the 15V power source. Although it is listed separately in the product specifications, the 12V requirements are included in the 15V total.

Physical Specifications

Table C–2 lists the PORTswitch 900CP physical and certification specifications.

Table C–2 PORTswitch 900CP Physical Specifications

Parameter	Specification
<i>Physical</i>	
Height	44.45 cm (17.5 in)
Width	4.45 cm (1.75 in)
Depth	15.25 cm (6 in); 25.40 cm (10.0 in) with a DEChub ONE or DEChub ONE-MX
Weight	1.86 kg (4.1 lb) ¹
<i>Certification</i>	
CE, CSA, FCC,TÜV, UL, VCCI	

¹ Include an additional 1.59 kg (3.5 lb) when installed into a DEChub ONE; when installed into a DEChub ONE-MX, add 2.10 kg (4.63 lb).

Acoustical Specifications

Table C–3 lists the PORTswitch 900CP acoustical specifications.

Table C–3 Acoustical Specifications

Acoustics — Declared values per ISO 9296 and ISO 7779¹

Product	Sound Power Level $L_{WA,d}$, B	Sound Pressure Level L_{pAm}, dBA (bystander positions)
	<i>Idle/Operate</i>	<i>Idle/Operate</i>
DECPM	4.9	35
DECPM + DEHUA	5.3	39
DECPM + DEF1H	5.3	39

Schallemissionswerte — Werteangaben nach ISO 9296 und ISO 7779/DIN EN27779²

Produkt	Schalleistungspegel $L_{WA,d}$, B	Schalldruckpegel L_{pAm}, dBA (Zuschauerpositionen)
	<i>Leerlauf/Betrieb</i>	<i>Leerlauf/Betrieb</i>
DECPM	4,9	35
DECPM + DEHUA	5,3	39
DECPM + DEF1H	5,3	39

¹ Current values for specific configurations are available from Digital Equipment Corporation representatives. 1 B = 10 dBA.

² Aktuelle Werte für spezielle Ausrüstungsstufen sind über die Digital Equipment Vertretungen erhältlich. 1 B = 10 dBA.

HOW TO ORDER ADDITIONAL DOCUMENTATION

DIRECT TELEPHONE ORDERS

In Continental USA
call 1-800-DIGITAL
(1-800-344-4825)

In Canada
call 1-800-267-6215

In New Hampshire,
Alaska or Hawaii
call 1-603-884-6660

ELECTRONIC ORDERS (U.S. ONLY)

Dial 1-800-dec-demo with any VT100 or VT200
compatible terminal and a 1200 baud modem.
If you need assistance, call 1-800-DIGITAL (1-800-344-4825)

DIRECT MAIL ORDERS (U.S. and Puerto Rico*)
