

## Read Me First

Thank you for purchasing our StorageWorks RAID Array 7000 Fibre Channel subsystem. Our RAID subsystems are designed to support the most popular computer platforms in the industry. As a prerequisite, you must also have purchased a platform specific HSG80 Solutions Software kit which allows you to use the storage subsystem on your chosen platform.

With the purchase of this new Array we request that you fill out and return your registration card. Registration information is used by DIGITAL to provide notification services to its customers. If the registration card was omitted from your kit please contact the StorageWorks Hotline at 1-800-DIGITAL.

DIGITAL maintains a StorageWorks WEB site that provides a timely source of StorageWorks product information at:

*<http://www.storage.digital.com>*

The major components of this kit are:

- 24 SBB Departmental Cabinet (SW370)
- Dual or Single HSG80 six channel controllers with 128MB write-back cache per controller
- Dual or single cache battery in SBB with cable
- 5 shelf power supplies
- Fully redundant cooling
- Environmental Monitor Unit (EMU)
- (6 or 2) 5 meter controller to host or hub cables
- (2 or 1) Fibre Channel hubs

Again, thank you for selecting DIGITAL StorageWorks.
