Thank you for purchasing our RAID Array 7000 or Enterprise Storage Array 10000. StorageWorks RAID subsystems are designed to support the most popular computer platforms in the industry. To do so you also must have purchased a platform specific HSZ70 Solutions Software kit which allows you to use the storage subsystem with your chosen platform. The Solution Software kit is necessary for the Array to properly function.

With the purchase of this new Array we strongly suggest that you will fill out your registration card. As an early order customer of the RA7000/ESA10000, registration has a special significance. When you return the registration card, you will receive a free upgrade to the new version of the Solutions Software kit including StorageWorks Command Console (SWCC) as soon as it is available. SWCC is a Graphical User Interface (GUI) utility that runs on a PC and the Agent on your host system and allows management of storage subsystems from any location on the network.

Registration information is used by DIGITAL to provide notification services and to its customers. If the registration card was omitted from your kit please contact the StorageWorks Hotline at 1-800-DIGITAL.

DIGITAL maintains a StorageWorks WEB site that provides a timely source of StorageWorks product information at:

<http://www.storage.digital.com>

The major components of this kit are:

- 24SBB Departmental Storage Cabinet (SW370)
- Dual or Single HSZ70 six-channel controllers with 64MB mirrored write-back cache each (expandable to 128MB each)
- I/O expansion module
- Dual or single cache battery in SBB with cable
- 5 shelf power supplies optionally expandable to eight
- Fully redundant cooling
- Environmental Monitor Unit (EMU)
- 5 meter host to controller cable (BN37A-05)
- Serial line assembly
- Controller to controller SCSI cable for redundant controllers,
- Host adapter cable (BN38E-0B)
