Dear AlphaStation 200 Series System Customer:

Your AlphaStation 200 system has been updated with new hardware, which requires at least Version 3.2 of the Digital UNIX operating system. If you ordered this system with the Digital UNIX operating system, Version 3.2 or higher was factory installed.

Originally, Version 3.0B of the Digital UNIX (OSF/1) operating system supported AlphaStation systems; now, however, *you cannot use a version prior to Version 3.2 with this system.*

Please note that Digital UNIX Version 3.2 is binary compatible with Version 3.0B. Digital has received no reports of migration-related issues from our software application partners. If this change poses a significant problem for your installation of this system, however, contact your local Digital office for more information.

Best regards,

Digital Equipment Corporation
